

Prerequisites for Publication

Authorship: The Editors of *Surgery Today* subscribe to recommendations formulated by the International Committee of Medical Journal Editors [<http://www.icmje.org>] regarding criteria for authorship.

Accordingly, each person listed as an author or coauthor for a submitted manuscript (does not include Review Articles) must meet *all three* criteria. An author or coauthor shall have:

1. Conceived, planned, and performed the work leading to the manuscript, or interpreted the evidence presented, or both;
2. Written the manuscript or reviewed successive versions and shared in their revisions;
3. Approved the final version.

Meeting these criteria should provide each author with sufficient knowledge of and participation in the work that he or she can accept public responsibility for the report.

Certification: This Certification Form should be signed and submitted with the manuscript. The senior or corresponding author is requested to certify that all listed authors qualify for authorship

according to the above three criteria. The author(s) should certify that except in the form of an abstract or as part of a published lecture, review, thesis, or dissertation (appropriately cited), no part of the work described has been published before and that the work is not under consideration for publication elsewhere. Authors who have any question concerning what may constitute prior publication must submit copies of any closely related manuscripts (published, in press, or submitted for consideration elsewhere) along with the manuscript that is to be considered by the Editors of *Surgery Today*. The Journal discourages the submission of more than one article dealing with the same data set or related aspects of the same study. The author(s) should also certify that: if and when the manuscript is accepted for publication, the author(s) agree to automatic transfer of the copyright to the publisher; and that the manuscript, or its parts, will not be published elsewhere subsequently in any language without the consent of the copyright holders.

Guidelines for Animal and Human Research: For experimental animals, specify the species, strain number used, and other pertinent descriptive characteristics. When describing surgical procedures on animals, identify the preanesthetic and anesthetic agents used, and state the amount or concentration and the route and frequency of administration for each. It is essential that human research adhere to the Declaration of Helsinki.

Certification Form – to be submitted with manuscript to *Surgery Today*

Article type: (Please check a box to indicate your article type)

- Review Article, Original Article (Experimental Original, Clinical Original), Case Report,
 Short Communication, How to Do It, Letter to the Editor

Manuscript title:

Authors' names:
(Full name in print)

I (we) certify that:

1. the author(s) of the above manuscript have all understood and agreed with the conditions in the "Prerequisites for Publication"
2. the manuscript has been prepared according to the "Prerequisites for Publication".
